

Conceptual Design Option 1 - Bi-Directional Bikeway on North Side of Pacific Avenue

Option 1 is to install a physically separated bi-directional bike lane on the north side of Pacific Avenue and to widen the sidewalk and boulevard space on the south side of the street. This option provides both a dedicated bike facility and enhanced streetscape creating a vibrant and connected corridor.

Other key features of this option include curb bump outs to improve pedestrian safety and comfort while crossing Pacific Avenue; enhanced landscaping along the corridor; and streetscape amenities such as improved lighting, benches, and bike racks. Details of the elements recommended, such as, the type of trees, benches, and bike lane separation will be confirmed once the preferred option is selected.

This option balances the needs of all users along the corridor by providing dedicated space for all modes while still maintaining on-street parking along the south side of the street.
